12025 Denton Drive

Dallas, TX 75234

*City Sewing is a Union Special distributor*

The 358-4NS is the culmination of 30 years experience in modifying this class of machine. We use Union Special model 35800 machines to convert. They have been the standard of excellence in the sewing industry for over a century.

Our conversion parts are made of the finest high carbon tool steel available and heat treated with our own carefully controlled processes.

The 358-4NS feeds from both top and bottom of material. It will sew any thickness of Neoprene "wet suit" material up to 5/16 inch. It will go from the thinnest to the thickest material with no need of adjustments.

For current price and availability, contact Bill Harris at:
